**Note:** the next steps are only valid for a fresh installation procedure, if you are updating the package, refers to the [Updating](#) section.

1. On the root folder of your **Laravel** project, require the package using composer:

```
composer require jeroennoten/laravel-adminlte
```

2. Install the required package resources using the next command:

```
php artisan adminlte:install
```

```
composer require laravel/ui
composer require laravel/ui "^2.4" 7
```

```
php artisan ui bootstrap
php artisan ui bootstrap --auth

php artisan ui vue
php artisan ui vue --auth

npm i axios vform
```

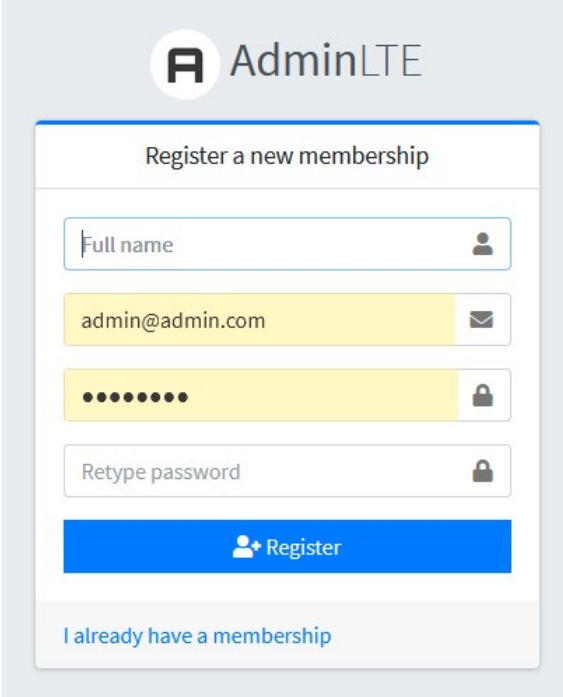

Make the view replacements executing the next artisan command:

```
php artisan adminlte:install --only=auth_views
```

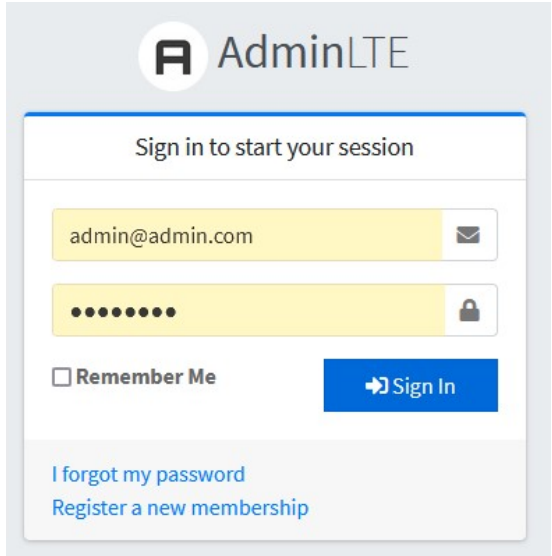

```
npm install && npm run dev
npm run watch

php artisan migrate
php artisan serve
```
